Mexico:

Mexico is a federal republic formed by 32 federal entities that take up the meridional part of North America. In agreement with the current Mexican Constitution, the official name of the country is the United Mexican States and the capital of all of the federal powers is Mexico City, whose territory has been designated as Distrito Federal (Federal District).

The country's territory extends north until the United States; to the east until the Gulf of Mexico and the Caribbean Sea; in the southeast until Belize and Guatemala; and to the West until the Pacific Ocean. The surface area of Mexico occupies nearly 2 million square kilometres. This large territory is home to 103 million people, which makes it the largest Spanish-speaking country, although Spanish is not the only language spoken in Mexico. Numerous indigenous languages are spoken throughout the country and are recognized as national languages by the Mexican state. The history of this territory dates back to more than 30 thousand years, a time in which many different cultures lived, including the Mayan culture. The Mayan city of Chichén-Itzá is one of the new Seven Wonders of the World.

Mayan Riviera:

The Mayan Riviera is the touristic area situated along the Caribbean Sea in the state of Quintana Roo, Mexico. Geographically it extends along the coast with a longitude of 130km, from the town of Puerto Morelos in the north to the town of Punta Allen in the south.

Created in 1998 under a mandate by public authorities (State of Quintana Roo, Canton de Solidaridad) and by the professional organizations of tourism in the area, the Mayan Riviera became, along with Cancun, the most important tourist destination in Mexico and one of the most visited destinations in the world.

Playa del Carmen is the head of the municipality of Solidaridad y boasts more than 23 thousand hotel rooms.

Similar to Cancun, the beaches of the Mayan Riviera are distinguished by having a fine, white sand and a beautiful, turquoise blue sea. In addition, the region is geologically formed by a large limestone plateau, which has the particularity of being permeable; over time numerous networks of small caves and subterranean caverns, also known as "cenotes" or water-filled caves have been formed, some of which are accessible to the public.
